Abstract			
<p>In organic ecological fertilizer prodn. we use forest wastes as main raw material and is produced by grinding and high temp. fermentation. The raw material contains 10-70% forest waste, as well as straw, weed, rice husk, manure and waste fr om slaceghtering animals. Proper amount of chemical fertilizer, trace element fertilizer, rare earth element fertilizer, lignite and leonardite are mixed in. This organic ecological fertilizer combines the advantages of organic fertilizer a nd inorganic fertilizer. It is quick in fertilizer effect does not harden soil, has no pathogenic larva and can improvesoil structure.</p>

AB	The invention relates to the manuf. of org. ***fertilizer*** by processing org. waste and adding chem. and trace-element ***fertilizers***. The ***fertilizer*** is manufd. by fermenting the pulverized raw material in the presence of water at 50-70.degree. for 15-45 d. The raw material contains 10-70% timber waste, crop stalk, 5-50% wastes from man and animal. The ***humic*** ***acid***, chem., RE, trace element ***fertilizer***, and one or more of ***plant*** growth regulator, soil conditioner and water retention agent can be added to the fermented product.
